Imperata Grassland Rehabilitation using Agroforestry and Assisted Natural Regeneration

Kathleen S. Friday, M. Elmo Drilling, and Dennis P. Garrity

INTERNATIONAL CENTRE FOR RESEARCH IN AGROFORESTRY
Southeast Asian Regional Research Programme
Bogor, Indonesia 1999

Acknowledgements

The content of this manual was drawn primarily from materials presented at the International Workshop on Agroforestry Innovations for Imperata Grassland Rehabilitation, held on January 23-27, 1995, in Banjarmasin, Indonesia, and from documented experience with Assisted Natural Regeneration in the Philippines.

Principal contributors to the concept and design of this manual included Hugh Bagnall-Oakley, Derek Laycock, P. John Terry, and C. Conroy (staff and advisors of Project F0028, Management of Imperata cylindrica for smallholder farming systems, DFID); and Patrick Durst (Food and Agriculture Organization [FAO] of the United Nations).

We gratefully acknowledge substantial review, suggestions, information and comments provided by Hartmut Abberger, Ernesto Cadaweng, Hubert de Foresta, Thomas Dierolf, I.V. Domingo, Patrick Durst, J.B. Friday, Ngaloken Gintings, William Granert, Chun Lai, Rodel Lasco, Dennis Orbus, John Parrotta, Paulo Pasicolan, C. Fernando Potess, Boylan Preston, James Roshetko, Wilma Sabueto, J.B. Sangalang, P. John Terry, Rodolfo Ungson, and Meine van Noordwijk. We also thank Delbert Rice for information and inspiration provided long ago.

Illustrations were prepared by Wiyono of ORSTOM/ICRAF and by illustrators at FAO and the International Institute of Rural Reconstruction publications. Text and illustrations were laid out by Tikah Atikah of ICRAF.

The writing and publication of this manual was funded jointly by the United States Agency for International Development, the USDA Forest Service, ICRAF, and FAO. Practical assistance was provided by the Asia-Pacific Agroforestry Network.

Introduction

*Imperata cylindrica* grasslands are found throughout Southeast Asia. They are perpetuated by *Imperata*'s ability to resprout quickly after fire. Fire is the main reason that tree plantations fail on *Imperata* grasslands.
Local people may be the cause of fire, but they are also the best partners to prevent it. They rehabilitate Imperata grassland rehabilitation when they own the trees and crops that will replace Imperata. The more valuable the new land use is to local people, the harder they will work to maintain it and prevent fire.

This manual is written to benefit people who live in an environment dominated by Imperata and who want to replace grasslands with agroforestry and forests. The techniques covered in this manual are most useful for medium-sized grasslands, confined to one village or community. The manual's content and format is designed for extensionists, agriculturists, foresters, development workers, and others who can assist communities and smallholders to design and implement Imperata rehabilitation activities.

Agroforestry practices involve a close association of trees and shrubs with crops, animals, or pastures. The combination of species often uses growing space more fully than simple tree plantations, creating more shade and reducing the growth of grass. A community of small landholders can implement intensive and complex agroforestry systems over a large area, thus rehabilitating large grasslands. This manual covers how to establish agroforestry in Imperata grasslands, but it is not a complete textbook on agroforestry. Extensionists are encouraged to get additional information on specific agroforestry systems and crops.

Assisted Natural Regeneration (ANR) stimulates the growth of natural saplings and seedlings. Regeneration is assisted by fire suppression, weed control, and attracting wildlife that spread seeds. ANR may include enrichment planting. On appropriate sites, forest cover can be re-established more quickly and cheaply with ANR than with conventional reforestation. ANR has often been implemented in partnership with local communities, making use of local knowledge and species preferences, and granting tenure of land or products. This manual contains an introductory field guide for ANR.

Readers of this manual should also have a copy of Imperata Management for Smallholders. It provides information on cultivation and herbicides to control Imperata as a weed within individual farms. See Appendix A for this and other recommended references with more detailed information on specific topics.
