Abstract - Research on the inspection & evaluation of the suitability level of A. auriculiformis ...

To evaluate the levels of suitability of Acacia auriculiformis and A. Mangium, the author relies on the comparison of the characteristics of climatic and soil factors and the requirements of planted species on these factors. Four suitability levels are classified i.e. S1: most suitable, S2: suitable, S3: rather suitable, N: not suitable or limitation for planted trees.

Computer is used to prepare various maps of suitability levels of 2 planted species: Acacia auriculiformis and A. Mangium in the North of Central Vietnam, scale 1/250.000
